Harvey Melvin
Ventro Group CEO

A message from our CEO

“As building compliance continues to evolve, our customers trust us to deliver clear, practical solutions that keep people safe and buildings compliant.

Our strength lies in our expertise across multiple areas of building compliance, combined with our commitment to knowledge sharing and staying at the forefront of legislative change.”

Our performance is built on consistent delivery, technical expertise and a commitment to doing things right. Clients trust Ventro to manage complex compliance requirements with the resources, systems and specialist knowledge needed to deliver reliably at scale.

This combination of proven experience, strong performance and continued investment has established Ventro as a trusted compliance partner across the UK.

“The real benefit of a single compliance partner is having one team that understands the wider picture. Fire, electrical, security and environmental compliance should not be managed in isolation.

A joined-up approach allows risks, remedial works and ongoing requirements to be managed consistently across an entire estate.”

Steven Wilson

Group Technical & Compliance Director

Our Growth & Journey

Built on Expertise. Trusted for Compliance.

Founded in 2014, Ventro was established to raise standards across the fire safety industry by delivering fully compliant, third-party accredited fire protection services with complete traceability and certification.

Since then, we have evolved from Ventro Fire Compliance into Ventro Building Compliance, providing integrated Fire, Electrical, Security and Environmental Compliance solutions that help clients manage building safety through a single trusted partner.

Today, with 10 nationwide offices, 400+ specialists, and experience delivering compliance solutions across 100,000+ buildings, Ventro is recognised as one of the UK's leading building compliance providers.

As we continue to invest in our people, technology and specialist businesses, our ambition remains clear: to become the UK's leading provider of building safety and compliance services.

Our Accreditations

As the UK's most accredited Fire and Life Safety Group, compliance is built into how we work. Our extensive portfolio of third-party accreditations and memberships provides independent assurance of our competence, quality and safety.

Our Frameworks

We are also appointed to a wide range of national and regional procurement frameworks, giving public and private sector clients a straightforward, compliant route to market.

Framework appointments reduce procurement time, support value for money and provide confidence that suppliers have been subject to robust due diligence and ongoing performance monitoring.

Our Assured Framework

One trusted partner. Complete building compliance.

Through one trusted building compliance partner, our Assured Framework provides a coordinated approach to assessing requirements, planning programmes, delivering works, and maintaining compliance across your buildings.

Fewer handovers. Greater continuity.

- Specialists and delivery teams working alongside each other
- A more joined-up approach
- Reducing transfer between providers
- Multi-skilled engineers to minimise disruption

A single view of your compliance requirements.

- Greater visibility across disciplines
- A connected view of the estate
- No more isolated fire, electrical or environmental data
- Planned activity in one place
- Identified actions tracked
- Completed works recorded
- Future requirements visible
- Better programme coordination
- A clearer picture for property and compliance teams

Built around your estate.

- Not a fixed package of services
- Built around existing arrangements
- Identifies where we can add value
- Shaped around your organisation
- Multi-service programme
- Covers long-term, estate-wide partnerships

Bringing specialist building compliance teams together.

From fire and electrical safety to environmental compliance, specialist consultancy, remedial works and ongoing maintenance, our Assured Framework provides a coordinated approach to managing compliance across your buildings.

Five stages, one annual cycle.

01

Baseline

We review your stock data, assessment register, action backlog and governance reporting as they stand today.

02

Interrogate

Forty questions worked through with your executive team, scored against documented evidence rather than opinion.

03

Benchmark

A maturity score per quadrant, set against comparable landlords and regulatory expectation.

04

Prioritise

A costed action plan sequenced by risk reduction per pound, owned by named individuals with dates.

05

Assure

Quarterly monitoring against the same measures, so progress is visible to residents, boards and regulators.

Your trusted building compliance partner.

From understanding what needs to be achieved, through to completing the work and maintaining compliance afterwards, our ambition is to build long-term partnerships that reduce complexity for our clients and help them manage their building compliance requirements through one trusted partner.

Our Services: Overview

Every building presents unique compliance challenges, which is why we bring together specialist expertise across **Passive Fire, Active Fire, Electrical, Security and Environmental Services** to deliver a fully integrated approach to building safety.

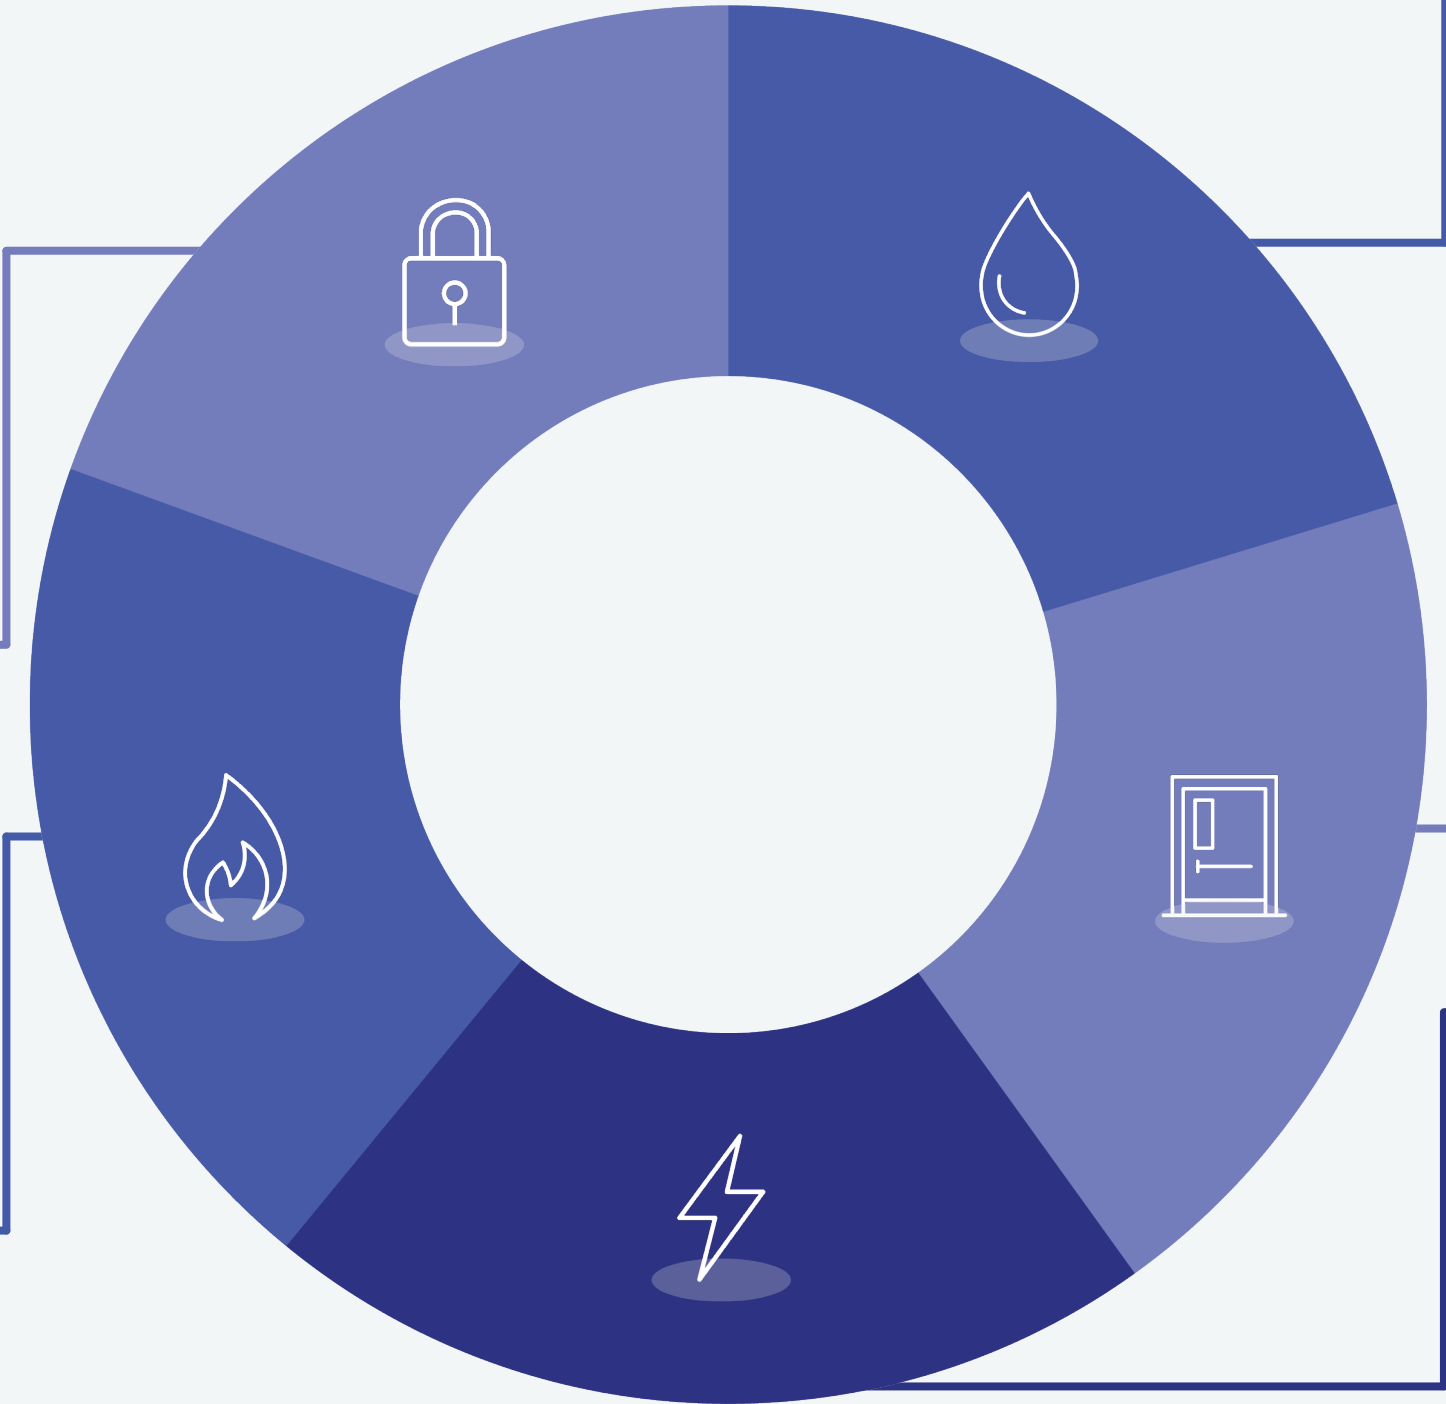

By combining these disciplines under one trusted partner, Ventro helps clients simplify compliance management and reduce operational disruption. This helps to protect people, properties and assets and provides complete confidence that their building portfolios remain safe, compliant and fit for purpose.

Security

Ventro provides security systems and monitoring solutions for premises and businesses across the UK. From small retail units to large industrial sites, our technology protects your property around the clock.

Active Fire

Ventro supplies, installs, commissions, maintains and repairs active fire protection systems, including fire alarms, sprinklers, suppression systems and extinguishers. Our experienced Active Fire Technicians also provide emergency response.

Environmental

Ventro Environmental combines air and water compliance to help clients manage risk and keep buildings safe and healthy. We assess, monitor, maintain and remediate across occupied buildings and complex estates.

Passive Fire

Ventro is a specialist in passive fire safety, delivering complete, compliant solutions for clients across a wide range of sectors. As a third-party accredited company, we are certified under both the BM TRADA Q-Mark and FIRAS schemes.

Electrical

Ventro delivers electrical services for commercial, industrial and domestic landlord properties, from PAT testing to EICR inspections. Experienced and accredited, we can manage both electrical and fire safety compliance across your portfolio.

Passive Fire

Passive fire protection restricts the spread of fire and smoke, maintains compartmentation and protects escape routes.

Ventro surveys, installs, repairs and maintains passive fire measures across occupied residential buildings, hospitals, schools, government estates and commercial properties throughout the UK.

Active Fire

Our Active Fire services cover the design, installation, commissioning, maintenance and remedial works required to keep critical life-safety systems operational and compliant.

Ventro works within live, occupied and complex environments and properties, coordinating works in a way that benefits occupants and clients alike.

Our Active Fire teams deliver the inspection, testing, maintenance, installation and remediation of critical life-safety systems across complex and occupied environments. Our experience spans housing, healthcare, education, government, retail and commercial estates, enabling us to adapt delivery around building users and day-to-day operations.

Works are delivered in line with relevant British Standards, manufacturer guidance and client requirements, supported by appropriate third-party accreditations, competent engineers and clear certification.

Electrical Services

Ventro provides electrical services that support building safety, compliance and continuity.

Our qualified teams support clients throughout the lifecycle of their electrical systems, delivering planned compliance programmes alongside the design, installation, testing and commissioning of new and upgraded infrastructure.

Ventro provides technical expertise and delivery capability to manage both everyday electrical requirements and major projects through one trusted partner.

Testing, Inspection & Compliance

We deliver EICRs and PAT testing to assess electrical safety, identify defects and support ongoing compliance. Clear reporting provides clients with the information needed to prioritise remedial actions and maintain safe electrical systems.

Fault Finding & Reactive Repairs

Our teams provide responsive fault finding and electrical repairs, identifying issues and completing remedial works efficiently. We work around building users and operations to restore safe, reliable systems while minimising disruption.

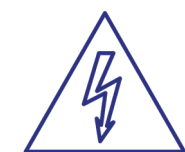

Electrical Projects

We deliver upgrades, replacements and new installations across power, lighting and distribution. From mains infrastructure and standby power to data cabling and emergency lighting, our teams provide reliable solutions tailored to each building.

Security Services

Ventro designs, installs and maintains security solutions that protect people, buildings and assets.

We assess site-specific risks and operational requirements before developing systems that are proportionate, reliable and easy to manage. Our teams deliver integrated systems across occupied buildings and key estates.

Ventro provides the design, installation and ongoing maintenance of integrated security and communication systems.

Our capabilities include Door Entry & Access Control Systems, Security Doors including Automatic Doors, Warden Call and Nurse Call Systems, CCTV, Intruder Alarms, Gates, Barriers and Roller Shutters, and other Electronic Systems.

Across the sectors we serve, we provide new system design and installation, planned preventative maintenance, reactive maintenance and emergency call-outs.

From initial design through to ongoing maintenance, our teams deliver reliable security solutions tailored to each building, its users and operational requirements. Keeping buildings and their users safe.

Water Compliance Services

Our Water Compliance services include Legionella risk assessments, temperature monitoring, sampling, tank inspections and cleaning, flushing programmes and cold water tank removal. Ongoing water hygiene is supported by our client portal, providing clear visibility of compliance records, recurring tests and requirements across individual buildings and wider estates.

Air Compliance Services

Our Air Compliance services include indoor air-quality assessments, ventilation hygiene and performance checks, ductwork inspection and cleaning, fire and smoke damper inspections and LEV support. Across occupied buildings and operational estates, we coordinate activity to minimise disruption while improving air quality, system performance and compliance visibility.

Clients We've Worked With:

Accreditations

Whatever the building,
whatever the sector,
we bring expertise,
experience and integrated
compliance solutions.

Our Sectors: Overview

No two buildings operate in the same way. Different sectors bring different risks, responsibilities, occupants and operational pressures.

Ventro combines specialist technical expertise with an understanding of the environments we work in, enabling us to deliver compliance programmes that protect people and keep buildings operational.

From occupied homes and healthcare environments to schools, public buildings and commercial estates, our teams adapt how works are planned and delivered to each client's priorities.

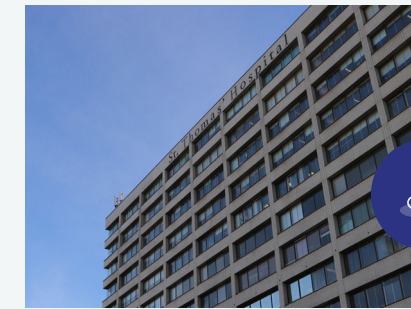

Our integrated approach brings together Active Fire, Passive Fire, Electrical, Security and Environmental Compliance, giving clients access to multiple specialist disciplines through **one trusted partner**.

Whatever the environment, our approach remains consistent: understand the risk, provide the right expertise, minimise disruption and leave a clear evidence trail of compliance. By bringing multiple disciplines together, Ventro helps clients simplify building compliance while creating safer, better-managed environments.

Housing

Supporting social housing providers, large landlords and student accommodation operators to maintain compliant homes. We deliver planned, reactive and project works.

Healthcare

Protecting critical environments without compromising continuity. Our DBS-checked teams coordinate around live healthcare settings to protect patients and services.

Education

Safer environments for learning, living and working. We support schools, colleges and universities with flexible compliance programmes planned to minimise disruption.

Commercial

We support retail, hospitality, facilities management and other commercial organisations to consolidate suppliers, coordinate works and improve compliance.

Government

Accountable compliance across public-sector estates. We support local authorities and government organisations with robust, traceable delivery, vetting and clear standards.

Housing

Compliance works delivered and designed around residents, occupied homes and complex property portfolios.

Ventro has supported housing providers, local authorities and managing agents since our inception. We understand the operational, regulatory and reputational pressures involved in keeping residents safe while delivering programmes across thousands of occupied homes.

Our resident-first approach combines clear communication, carefully planned access, safeguarding awareness and flexible delivery. We coordinate surveys, installations, maintenance and remedial works to reduce repeat visits and disruption, while providing clients with consistent data and programme visibility.

Clients We've Worked With

Across Fire, Electrical, Security and Environmental Compliance, our teams help housing clients manage risk, prioritise investment and maintain safer homes and communal spaces.

Acting as one trusted partner, Ventro helps simplify building compliance, delivering safer, well-managed homes for residents and landlords alike.

Client Testimonial

“The staff were absolutely amazing and carried out a thorough investigation before getting to work.”

 MTVH Metropolitan Thames Valley

Case Study

Overview

Ventro delivered passive fire prevention surveying and remediation across Chesterfield Borough Council's housing stock, addressing compartmentation issues identified in roof spaces and bringing properties up to compliance standard.

The Challenge

Chesterfield Borough Council needed to comply with OJEU procurement regulations while significantly improving fire safety compliance levels across their housing portfolio. Early compartmentation health checks had flagged potential issues, and the council needed a partner who could both survey and remediate at scale, while keeping resident communication clear enough to prevent complaints escalating.

The Solution

Ventro was appointed through the Efficiency East Midlands (EEM) framework, ensuring a fully compliant procurement route. Compartmentation health checks swiftly confirmed the necessary remedial works, particularly in roof spaces, and Ventro's passive fire prevention teams carried out surveying, fire door installation and remediation across the estate — with every identified item tracked from initial tag through to final install photo, supporting the Golden Thread of information from manufacture to installation.

The Result

Post-implementation, Chesterfield Borough Council achieved a remarkable 90% improvement in compliance levels. Our efficient execution of Fire Risk Assessment actions also led to a significant 75% decrease in customer complaints. This systematic approach contributed directly to the Golden Thread of information, providing comprehensive asset data from manufacturing to installation.

Healthcare

Delivering specialist compliance solutions in healthcare settings where continuity, infection control and patient safety are critical.

Hospitals, clinics and care settings operate around the clock, supporting vulnerable people. Vento plans and delivers compliance works with sensitivity and discretion, coordinating closely with estates and clinical teams to minimise disruption.

Clients We've Worked With

Our teams are experienced in high-traffic environments, sensitive wards, theatres and mental health settings. Works are phased around clinical activity to minimise disruption, with DBS-checked personnel coordinating Fire, Electrical, Security and Environmental Compliance through a trusted partner.

We work closely with estates teams to plan access, manage risk and maintain continuity, helping healthcare clients keep critical environments safe and compliant while reducing disruption for patients and staff.

Case Study

Overview

We delivered the complete refurbishment and reconfiguration of a former NHS dental facility, creating six modern clinical rooms through coordinated building, mechanical and electrical works within a live environment.

The Challenge

The NHS required a former dental facility to be transformed into six new clinical rooms to support improved GP services. Works involved a complete strip out and reconfiguration, carefully planned around a live healthcare environment to maintain safety and minimise disruption.

The Solution

Vento delivered the full refurbishment, including 90-minute fire-rated partitions, new door openings, rewiring, LED lighting and medical lamps. Mechanical works included new water services, clinical basins, LST radiators and drainage, alongside new ceilings, finishes and associated building works.

The Result

Vento transformed the former dental facility into six modern clinical rooms supporting improved GP services. The completed scheme provides a compliant, fit-for-purpose environment with upgraded building, mechanical and electrical systems.

Education

Schools, colleges and universities contain diverse spaces, from classrooms and accommodation to laboratories, workshops, kitchens, libraries and sports facilities. Ventro tailors compliance programmes to these varied risks and to the practical demands of the academic calendar.

We schedule surveys, installations and maintenance during low-occupancy periods, holidays or out-of-hours where required, planning each programme around the needs of the education environment.

Our DBS-checked teams work with clear segregation, controlled access and close liaison with estates staff to protect pupils, students, staff and visitors. By coordinating works around teaching hours, term dates, examinations and activities, we help maintain safe, compliant buildings while keeping disruption to learning and operations to a minimum.

Our integrated services support schools, colleges and universities with Fire, Electrical, Security and Environmental Compliance across single sites and complex multi-building estates. From surveys and planned maintenance to installations and remedial programmes, we provide a coordinated approach with clear reporting and programme management. This gives estates teams greater visibility of compliance requirements, reducing the need for multiple contractors and providing one trusted partner for safer learning environments.

From planned maintenance and testing to remedial works and larger compliance programmes, our teams provide clear reporting, consistent communication and support throughout delivery.

This joined-up approach gives estates teams greater visibility across their buildings, simplifies the management of multiple compliance responsibilities and supports safer environments for pupils, students, staff and visitors.

Case Study

Overview

Ventro upgraded Ellen Tinkham School's fire alarms, replacing the existing closed-protocol system with an integrated solution connecting multiple buildings and enabling remote ARC monitoring.

The Challenge

Ellen Tinkham School operated a closed-protocol fire alarm system, restricting maintenance and replacement options and limiting flexibility for future upgrades.

The system could not integrate with the security alarm, creating additional management requirements and requiring both systems to be maintained independently. A more flexible, integrated solution was needed to improve fire safety, simplify ongoing maintenance and provide a coordinated approach across the school's multiple buildings.

The Solution

Ventro replaced the closed-protocol system with a 2-loop Kentec fire alarm panel, integrating it with the intruder alarm to enable remote ARC monitoring.

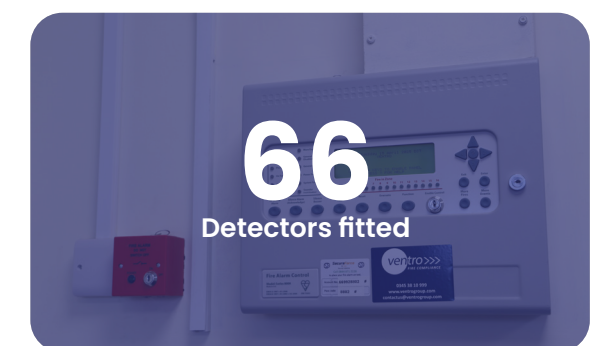

Network cabling connected the main school, reception, log cabin and biomass plant, with new detection devices, sounder beacons, call points and isolation controls creating a single, coordinated system across the site.

The Result

The link to the intruder alarm enabled remote fire alarm monitoring via the ARC, supporting a faster response to potential issues and enhancing overall school safety. Ventro also worked directly with Kentec to identify and configure the most suitable fire alarm solution for Ellen Tinkham School, tailored to the site's specific requirements.

The integrated system provided a more efficient approach to ongoing management and maintenance.

Commercial

Your trusted compliance partner for safer, compliant commercial properties and multi-site estates.

Commercial teams need specialist partners who can deliver consistently across different building types, locations and operating hours. Ventro supports facilities management providers, property managers and other commercial clients with a comprehensive range of building compliance solutions, delivered through one trusted partner.

Clients We've Worked With

Our experience spans retail, logistics, warehousing, hospitality, offices, residential portfolios and mixed-use estates. We tailor delivery around trading hours, tenant needs, access restrictions and business continuity requirements, with central reporting and local support.

Building on this flexibility, our broader Building Compliance offer enables clients to consolidate suppliers, reduce interfaces and manage Fire, Electrical, Security and Environmental requirements through one accountable partner.

This joined-up approach simplifies programme management, improves reporting consistency and provides clearer compliance visibility across complex estates.

Case Study

Overview

Ventro delivered a nationwide fire alarm upgrade programme across Tesco's large-format retail estate, upgrading systems to L2 standards across multiple sites as part of a long-term fire safety improvement programme.

The Challenge

Delivering fire compliance works across operational Tesco stores, while maintaining trading activity and protecting customers and staff. Works were planned around deliveries, restricted areas and busy periods to minimise disruption and maintain safety.

The Solution

Ventro planned delivery around store operations, supported by site-specific RAMS and close coordination with Tesco teams. Works were scheduled around key operational periods, with supervision and segregation maintaining safe access.

The Result

A coordinated approach enabled fire compliance works across live retail environments while minimising disruption. Careful planning, communication and flexible scheduling helped Ventro maintain safety and quality around operational requirements.

36

National sites worked on

4

Year long contract to date

Government

Government, defence, custodial and judicial environments require rigorous controls, reliable documentation and teams that understand security-sensitive operations. Ventro delivers compliance solutions within these constraints, coordinating access, permits, vetting and work sequencing with site stakeholders.

Our teams adapt delivery around security protocols and operational needs, using controlled access, clear communication and robust reporting to minimise disruption. From surveys and planned maintenance to remedial works and larger programmes, Ventro provides accountable, traceable delivery that helps clients maintain compliance and protect the continuity of critical public services.

Clients We've Worked With

Our experience includes defence estates, police and justice environments, civic buildings and local authority portfolios. Relevant personnel can be DBS or NPPV vetted, and programmes are supported by robust health and safety, quality and information-management processes.

By combining multiple compliance disciplines, we help public-sector clients simplify procurement, improve estate-wide visibility and maintain consistent standards across complex portfolios. This joined-up approach improves oversight across diverse estates and gives public-sector clients confidence that their buildings remain safe and compliant.

Client Testimonial

Ventro have undertaken Fire Door Inspections across our portfolio, and this has led to them tendering for future projects and they are now on **our preferred contractor list for Fire Stopping works**. The works were all delivered to KPI and flash to bang was two weeks at the start.

VIVO Defence

Case Study

Overview

Ventro was procured by NPCC through the EEM framework to deliver fire door inspections, maintenance and remedial works across the client's operational estate.

The Challenge

Working within an operational police environment required Ventro to deliver fire door inspection and maintenance works while complying with strict security and access requirements. All relevant personnel required Enhanced DBS and NPPV Level 2 clearance, with the vetting process taking approximately six weeks.

Access to certain secure areas also required advance coordination to ensure works did not interfere with day-to-day police operations.

The Solution

Ventro coordinated access with a designated site officer and planned works around Mansfield Police Station's operational requirements. Our team completed fire door maintenance and inspections, supported by a comprehensive fire safety health check.

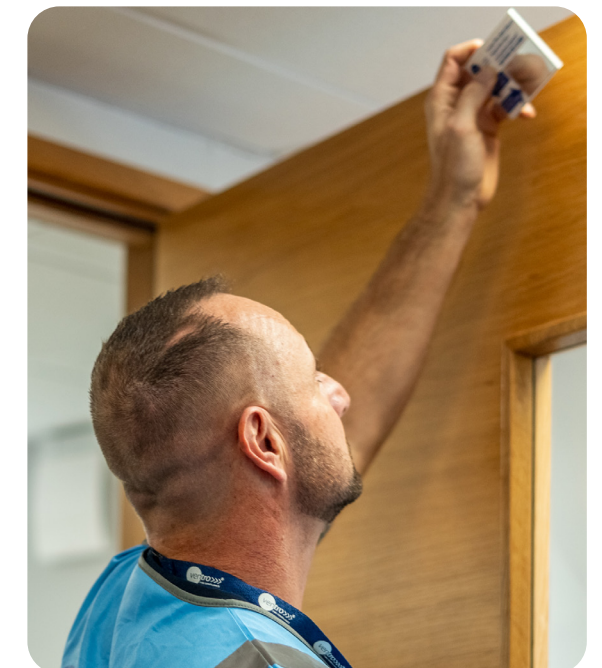

Findings were documented and reviewed, with remedial work assessed and replacement doors recommended where existing assets could not be suitably remediated.

The Result

The programme provided NPCC with a clear, evidence-led assessment of fire door condition across the areas inspected, identifying maintenance requirements, remedial actions and doors requiring replacement.

Careful planning and appropriately vetted personnel allowed Ventro to work within a sensitive operational environment while minimising disruption and maintaining the security requirements of the site.

"Since joining Ventro, their management team have worked tirelessly to accommodate DFP's customer base, utilising their leading position within the industry. Ventro greatly expanded the breadth of services DFP offer, for a complete fire safety and compliance solution."

Howard Burrows
General Manager, DFP

Case Study: Healthcare

CLIENT:

Bedfordshire Hospitals
NHS Trust

PROJECT:

Fire Door Surveys

OBJECTIVE:

The programme aimed to establish a consistent, evidence-led assessment of fire door condition across the Trust's estate, identifying defects and prioritising remedial works while minimising disruption to clinical services.

Overview

Ventro was appointed to undertake a large-scale fire door survey programme across the Bedfordshire Hospitals NHS estate, providing the Trust with a consistent and evidence-led assessment of its fire door assets. The programme covered more than 7,300 doors across 88 blocks, requiring a carefully coordinated approach within busy, operational healthcare environments.

The wider Trust operates Bedford Hospital and Luton & Dunstable University Hospital, incorporating environments ranging from emergency departments and critical care to operating theatres, maternity, paediatric and general ward areas.

The Challenge

The Trust required a comprehensive assessment of a substantial and varied fire door estate, with thousands of assets located across buildings of different ages, uses and clinical functions.

Survey activity had to be undertaken within live healthcare environments where maintaining patient safety, clinical access and continuity of services was essential. Access to wards, clinical departments and other sensitive areas therefore needed careful coordination, while the scale of the estate demanded a consistent surveying methodology capable of producing reliable information for future remedial planning.

The Solution

Ventro mobilised a dedicated team of seven fire door surveyors, to provide the resource and coordination required for this project.

The surveys were structured across various blocks, with each asset assessed consistently and findings recorded digitally, creating a traceable record of door condition and identified defects.

Delivery was coordinated around the requirements of the live hospital estate, with the surveying team working alongside site stakeholders to manage access and maintain progress without unnecessarily disrupting clinical activity.

The Result

The programme provided Bedfordshire Hospitals NHS Foundation Trust with a consistent evidence base covering more than 7,300 fire doors.

Rather than isolated inspection records, the Trust gained structured information identifying defects and supporting the prioritisation of future remedial works.

Dedicated surveying resource and site management enabled a substantial inspection programme to progress across an operational healthcare environment.

Case Study: Commercial

Overview

Ventro was appointed by Ameresco, on behalf of Vinci, to deliver specialist passive fire protection as part of a major sustainability upgrade at London Stadium. The project involved protecting new solar-energy infrastructure while maintaining fire safety within a live venue welcoming more than 1.4 million visitors annually.

The Challenge

New roof-mounted solar infrastructure required high-voltage inverters and transformers to be installed within the stadium's upper stands, close to public areas and structural steelwork. Ventro needed to contain the potential spread of fire, smoke and heat without affecting the equipment's operation. Delivery also had to accommodate Premier League fixtures, concerts, strict security controls and changing site conditions while the stadium remained operational.

The Solution

Working alongside structural engineers, fire consultants and stadium safety teams, Ventro developed bespoke fire compartments around the new equipment. Eight fully enclosed cages were protected across walls, floors and ceilings using third-party tested systems, with fire-resistant insulation, intumescent ventilation and certified penetration seals. Smoke detection was integrated into the stadium's main fire panel, while robust security measures protected the installations within the live public environment.

The Result

The completed installations passed post-project audits by the stadium's facilities and health and safety teams, with no reported faults, breaches or heat issues following completion. Each enclosure now functions as an independent fire compartment, helping contain an incident at source and protect spectators, infrastructure and power systems. **The project was recognised as Passive Fire Safety Project of the Year at the Security & Fire Awards for Excellence 2025.**

Making a positive difference in the communities where we work. Ventro recognises that the way we deliver matters as much as the services we provide. Our social value and ESG approach focuses on creating local opportunities, supporting communities, reducing environmental impact and maintaining transparent, responsible governance.

Ventro visited Worksop to give back to residents, providing free air fryers as a gesture of appreciation for their support and cooperation during essential fire safety works. This initiative was designed to offer a practical benefit while recognising positive relationships built throughout the project.

This initiative recognised the patience and cooperation shown by residents while essential fire safety works are carried out. By supporting the local community in a practical way, we're helping to make a positive difference to everyday lives, reinforcing our commitment to creating lasting social value in the areas we serve.

This year Ventro took part in the Great British Spring Clean, by helping spread the word that the environment belongs to everyone.

This initiative aimed to clean the local area surrounding our head office, helping to protect and help local wildlife from litter.

By investing in local green spaces, we're helping to create cleaner, greener and more enjoyable environments for everyone who lives, works and spends time in the community.

A message from our Social Value Lead

"Social value is at the heart of everything we do at Ventro."

I believe that our work must go beyond compliance and regulations, creating lasting positive change in the areas and communities we serve. Ensuring Ventro leaves a legacy of safety, opportunity, and sustainability means a great deal to me personally, and to the wider Ventro team."

Bethany Walsh
Social Value Lead, Ventro Group

The Great Giving Back is Ventro's annual campaign supporting people and families within the communities where we work. Launched in 2022 in response to the increasing cost-of-living pressures facing households across the UK, the initiative began with a simple ambition: to provide 30 boxes of essential items to those who needed additional support over the festive period.

Since then, the Great Giving Back campaign has grown into an annual tradition, bringing together our teams, clients and supply chain to make a positive contribution within local communities.

Each year, boxes and hampers containing food essentials, toiletries and festive treats are donated to foodbanks and community organisations local to our projects and offices. By supporting organisations already embedded within these communities, we can help ensure donations reach people who need them most.

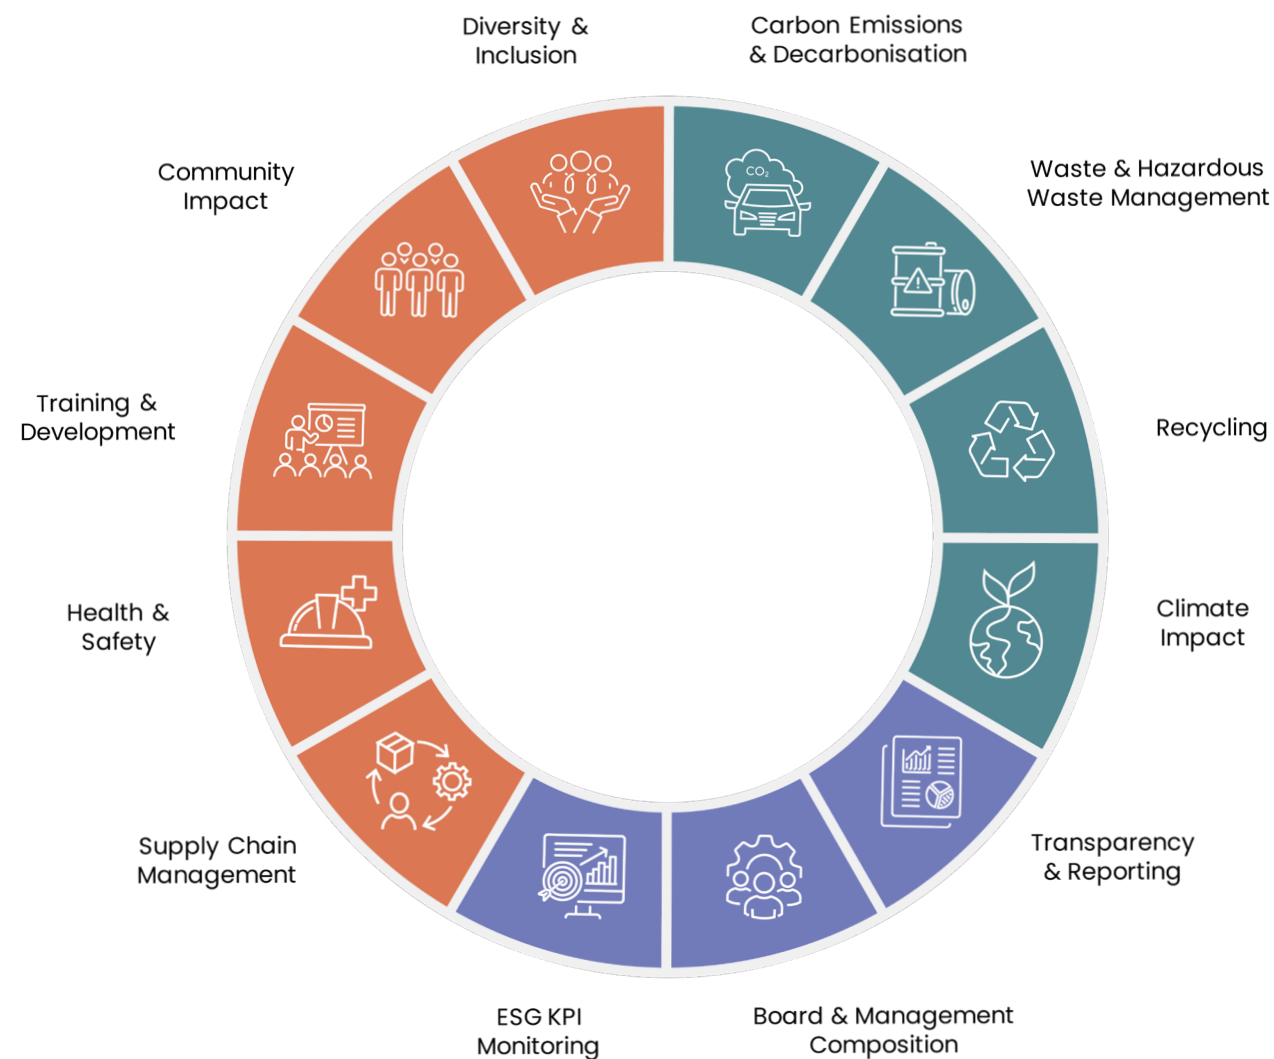

ESG

Environmental, Social and Governance factors shape how we operate, from reducing our environmental impact and supporting local communities to maintaining responsible business practices.

Environment: We are dedicated to minimising our environmental impact through sustainable practices, reducing our carbon footprint, and promoting eco-friendly initiatives.

Social: We prioritise creating positive social impacts by fostering an inclusive workplace, supporting community development, and upholding high standards of social responsibility.

Governance: We ensure robust governance practices by maintaining transparency, ethical conduct, and accountability in all our operations, safeguarding the interests of our stakeholders and maintaining compliance with regulatory standards.

Environmental

Carbon & Decarbonisation

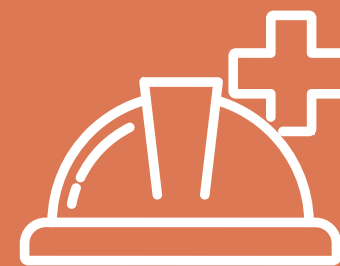

Low-emission vehicles, efficient route planning and EV charging help reduce travel emissions and fuel consumption.

Waste & Recycling

Go Green Reports track project waste and support responsible disposal. We continue to prioritise recycling and reduce waste sent to landfill.

Climate Impact

Our 2050 net zero objective is supported by carbon-literate staff and ongoing action to reduce our environmental impact.

Social

Diversity & Inclusion

Fair recruitment, equal opportunities and clear equality policies support an inclusive workplace where people can develop and succeed.

Community Impact

We aim to drive an “above compliance” culture while supporting the communities in which we work. Resident liaison, engagement events and initiatives such as community coffee mornings help build stronger relationships and positive outcomes.

Governance

Transparency & Reporting

Regular ESG reporting provides clear visibility of performance, progress and key environmental, social and governance KPIs.

ESG Performance

Go Green tracks recycling across project sites, while Future Net Zero certification supports our commitment to measure and reduce our carbon footprint by 50% by 2030.

Governance & Accountability

Clear accountability, transparent decision-making and robust risk management support responsible governance across Ventro.
